

FAQ: Plan Review & Design Appointment

Contact your designer with any questions not listed below.

Can I have a copy of my house plans?

Your Designer can share the Exterior Elevations and the Electrical Pages from your plan set. Our detailed pages are copyrighted and cannot be shared.

Can I choose to change a door swing on my plan?

You can choose to flip a door swing at your Design Appointment with your Designer's guidance. Examples: Pantry, Flex Room, Water Closets

Can we select our landscaping?

At the beginning of each community, our landscapers develop a custom plan to determine the look of each community's streetscape. Our landscape layouts are based on elevation, but our landscapers do account for the time of year they are planting, so you might not have the exact plants as your neighbor.

**Am I getting credit for upgrading a selection?
(appliances, hardwood, and lighting)**

Yes, a credit is included in the price of the upgrade, but the credit isn't the same as if you were to buy it at a larger store like Lowes or Home Depot. As you can imagine, we buy all of our products direct from our vendors and due to the volume of homes we build, we do get a better price for our standard options.

If we provide _____(lighting, AV, etc.) will you install it?

We only use our vendors and selections to ensure the quality of your home. If there is something you would like to add after the fact, your Designer will be happy to share a contact for an installer for after closing.

Where will my included outlets be placed? Do I get to place those?

Included outlets are placed per code by our electricians every 6-12 feet on every wall longer than 4ft. Any outlets added above the standard height of 12" are additional outlets chosen by the homeowner.

What size is my fridge opening?

You can find your cabinet opening size on your cabinet drawings from your Design Appointment. Keep in mind, there is a difference between counter depth and standard depth refrigerators, which is up to the homeowner's discretion. Counter depth will be flush with the perimeter counters, and cabinet opening with the exception of the door itself. The standard depth sticks out further from the cabinets, and typically has more cubic feet on the interior.

What height bar stools do I get for the kitchen?

Our countertops are at 36". You will want to purchase "counter height" stools/chairs.

What do I need for an electric car?

You will want to add a 220 plug with a 60 amp circuit to the garage. It will come with a blank plate so that you can add the face plate needed for your specific use after closing.

What is the difference between a fan box and a light box, LED and recessed can

Fan boxes allow you to install a ceiling fan to a room and comes with two switches: one for the light, and one for the fan. Light boxes can be added for any light fixture you want to install. These come included in the dining room, for example. You will want to add light boxes over the kitchen island if you want to select pendant lights. LED flush mounts are a fixture that gets installed with a light box, and can be easily changed out for another light fixture in the future. Recessed can lights recess into a unit above the ceiling, and cannot be replaced with a typical fixture later.

I use a lot of tools and/or have a deep freezer in my garage. What should I add?

You will want to add a dedicated outlet also known as a "Freezer Plug" anywhere you have tools or appliances that could trip on a regular circuit.

What do I need to add for outdoor lighting/ Christmas lights?

You can add additional exterior plugs (outlets) at various heights for Christmas lights or patio string lights in the ceilings or eaves. You also have the option to connect that outlet to a switch for easier control. If you are planning to add exterior uplighting after close, you have options to add additional outlets or install a transformer at one of your included outlets.

What do I need to add if I want to add a outdoor fire pit/fireplace after close?

We have the option to add a gas line stub out on the exterior of the home. This must come off an exterior wall but can be used for future grills, fire pits, or fireplace after closing.

What are the perks of adding a tankless water heater?

Tankless water heaters do not provide instant hot water, but once you receive hot water at your source it will not run out. This is a great option for large families!

What is the difference between a regular and a comfort height toilet?

Comfort height toilets are 2 inches taller than a standard toilet. They are both elongated.

What is rock wool insulation?

Rock wool insulation provides a sound deadening barrier for interior walls. This is a great option for nurseries, music rooms, or theaters. It is not completely sound proof and does not provide any additional efficiency other than sound.

Can I choose to have some included options deleted?

Included amenities that are allowed to be deleted vary from each community. Some of these options include cabinet hardware or wire shelving. You can ask your designer if you have an included option you would like to delete. We do not credit anything back for included deleted options.

What is the difference between the included and upgraded dishwasher?

The upgraded dishwasher includes a stainless steel interior, a 3rd top rack for utensils, and is more energy efficient.

Do I have to add a fridge at my appointment?

You do not have to select a fridge at your appointment with your Designer. This option provides the opportunity to loop your fridge into your purchase price, and have Signature install it for you.

What is the difference between quartz and granite?

Granite is a natural stone that comes from quarries. Quartz countertops are engineered from quartz and other minerals. Granite cuts are all unique while quartz are more consistent since they are man-made. Granite is durable, but porous, and requires sealing and more maintenance by the homeowner. Quartz is not porous, and does not require sealing since a durable resin is included in the manufacturing process.

What are the differences between Floorte and engineered hardwood?

Shaw's Floorte hard surface is a luxury vinyl plank flooring. This option is completely waterproof and scratch resistant - great for an active family. Engineered hardwood is comprised of real wood veneer making every floor unique. Engineered hardwood cannot be sanded and re-stained since it has a scuff resistant finish allowing additional resistance to scuffing unlike traditional hardwood.

**I already have a light for a specific room.
Do I have to select a light?**

We require a light source for every room for codes and quality assurance. If you have a light you would like to install after closing, we can install the LED option in the flush light category of the catalog.

**What is the square footage, linear foot, measurements
of a certain room or wall?**

Contact your Designer for any measurements
